Summary

Computer Science undergraduate with experience in backend development, distributed systems, AI workflows, and full-stack applications. Built scalable services and production-style applications using Go, Python, Redis, Docker, PostgreSQL, FastAPI, and React. Worked on distributed job-processing systems, authentication services, multi-agent AI applications, and REST APIs, with a strong foundation in data structures and algorithms.

Education

Amrita Vishwa Vidyapeetham, Coimbatore *B.Tech in Computer Science* Aug 2024 – Aug 2028
◦ CGPA: 8.76

Projects

Stock Analysis Bot: *Python, LangGraph, Gemini API, Yahoo Finance API (Dec 2025)* [GitHub Repository](#) 🔗

- Built an AI-powered stock analysis chatbot providing real-time market data, news summaries, and actionable investment recommendations.
- Integrated LangGraph, Groq LLM, and Gemini API to orchestrate data retrieval and generate structured, evidence-based insights efficiently.

Code Compiler Platform: *Go, Redis, Docker, REST APIs (Jun 2026)* [GitHub Repository](#) 🔗

- Built a distributed online code execution platform supporting multiple programming languages with secure containerized execution.
- Designed an asynchronous job processing architecture using Redis queues, worker services, and Docker sandboxes to ensure scalable and isolated code execution.
- Implemented job tracking, execution time limits, resource restrictions, and REST APIs for reliable code compilation and runtime evaluation.

Authentication Service: *Go, PostgreSQL, JWT, REST APIs, Docker (May 2026)* [GitHub Repository](#) 🔗

- Developed a production ready authentication and authorization service supporting user registration, login, JWT-based authentication, and role-based access control.
- Implemented secure password hashing, token validation, middleware-based route protection, and PostgreSQL backed user management.

Vita-Care: *React.js, FastAPI, Gemini AI, WhatsApp Integration (Jan 2026)* [GitHub Repository](#) 🔗

- Developed a voice-integrated healthcare coordination platform enabling patients to manage appointments, prescriptions, and medication reminders using natural language commands.
- Leveraged Gemini AI and a microservices architecture (React frontend, FastAPI backend, Node.js WhatsApp bridge) to automate scheduling, notifications, and reminders directly to patients' phones.

Technical Skills

Programming Languages: Go, Python, Java, JavaScript, C, C++

Frameworks & Libraries: React.js, Node.js, Express.js, FastAPI, LangChain, LangGraph

Databases: MySQL, PostgreSQL, Redis

Tools & Technologies: Docker, Git, GitHub, Linux

Achievements

- Won **Hack101** hackathon for **FlixTogether**, a group-based movie recommendation platform.
- Secured **3rd Place** in the **Build2Break** hackathon at **Anokha 2026** for developing **Vita-Care**.
